

HOW DO YOU CREATE THE MODERN WORKPLACE?

The modern workplace has transformed since the pandemic. What has worked before in a once-tethered office set-up is no longer enough to sustain the hybrid model that more and more organizations have been implementing. Device strategy, device management and portability are more important than ever. Take a look at some considerations for an effective work-from-home strategy when it comes to communications devices.

For hybrid to work effectively, at-home work experience is as important as office experience. **Let's talk about device strategy for your home office.**

Home Office Goals in a Hybrid Setting

Device Strategy

To ensure focused work at home, limit distractions by investing in an optimal and personalized device strategy that guarantees smooth experiences. Choose headsets with active noise-cancelling instead of low-end corded headsets or HD cameras rather than built-in web cams for quality viewing.

Device Management

Make sure the devices and firmware for the hybrid and remote employees are updated and optimized regularly for a consistent experience. It is also critical that the devices are certified to work with the core platforms, whether it is Microsoft Teams or Zoom.

Portability

Devices in modern work are no longer tethered to their stations at the office. In order to streamline hybrid work, portability of devices and securing network access are essential. Some devices will have to be travelling back and forth as the employee goes from their home office to campus.
